

# Title of Extended Abstract Using 18 Point Times New Roman Boldface Type and Initial Capitals

Author Name  
Organization  
City, State/Province, Country

## 1 Author Instructions for 26<sup>th</sup> ICDERS Extended Abstracts

A complete extended abstract must be submitted in the length and format intended for final publication in the 26<sup>th</sup> ICDERS electronic proceedings. Specifically, a submitted abstract should be at least 4 pages but at most 6 pages long. Please use this **Word template** or the Latex template to create your extended abstract file and convert the file into the Adobe Acrobat .pdf format. Authors should submit extended abstracts in Adobe Acrobat .pdf format whenever possible. Please embed all fonts (select this option when converting file to PDF) in your document. Microsoft Word is also an acceptable format with file size less than 5 MB; all graphics must be embedded (not linked), either within the text or at the end of the paper. The extended abstract must be submitted to the program committee as a pdf file named after the first-author name (i.e. "**firstauthorlastname-papernumber.pdf**"). Templates margins and text area are set so printed abstracts fit best in the 8 1/2 by 11 in US standard page format and should not be changed. Font sizes should also not be changed. Please also do not change the position of the first line of the title. That page layout will provide good results also when printing on A4 paper. Note that headers and footers for the title page are different from those of pages 2 onward. Headers of the title page and footers of other pages must not be changed. Only the left footer of the title page and the headers of other pages must be changed according to the following rules: For the title page: left foot: indicate the correspondence details, center foot: leave empty, right foot: leave unchanged For other pages: left header: indicate the first author name (see example) center header: leave empty, right header: indicate the short title of your extended abstract LaTeX typesetting is strongly encouraged. Do not enter any copyright statement on the abstract: a general copyright statement will be added by the editors in the ICDERS electronic proceedings.

### 3 An Example of a Simple Equation

A simple equation is:

$$(a + b)^2 = a^2 + 2ab + b^2 \quad (1)$$

### 4 Examples of Figures and Tables

Sample figure:

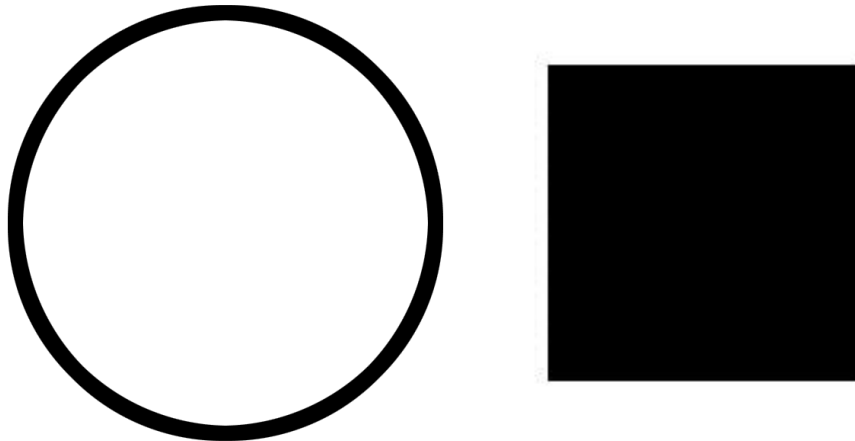

Figure 1. Left: a circle; right: a square

Sample table:

Table 1: A simple table

Type	Length (mm)	Time (s)	Remarks
A	5000	1	good
B	2000	2	bad
C	1000	3	good
